

Why would you pay any less?

With an additional \$3000 Investment in an energy efficient Radiant Pool, you'll pay just \$28.67 per month more.

(Based on Loan Amount: \$3000 Terms: 15 years APR: 8%)

For that small extra amount, you'll get:

You will see return on your additional investment in no time!

- Annual Energy Cost Savings \$ 655
- 5 Year Energy Savings Return \$ 3,275
- 10 Year Energy Savings Return \$ 6,550
- 20 Year Energy Savings Return \$13,100

It's the only swimming pool that pays for itself.

Energy-efficient insulated wall panels not only make the Radiant Pool more comfortable, it can yield long-term financial rewards. A Radiant Pool will cost on average about \$3,000 more than a steel pool, but that initial investment and more will come back to you in energy cost savings. And if you finance using a home equity loan, your interest is tax deductible.

In addition, with the non-prorated lifetime transferrable warranty, a Radiant Pool could bring in a higher price when you sell your home. No other pool offers this kind of return on your investment.

There is no smarter backyard investment.

simply brilliant.
